**Bridge remote
and in-office
collaboration.**

i3-TECHNOLOGIES

Solutions for your business.

Meetings have **evolved** over the last few years thanks to technology and collaboration styles, as well as the meeting room itself. There are many challenges to tackle when it comes to creating the 'perfect' meeting room and while **technology plays a crucial role**, it should also be a solution that is **flexible** enough **to fit into** the organization's **existing infrastructure**. Technology shouldn't change the way you meet, but rather **enhance** it by fostering **collaboration** and creating an **equal experience for everyone** – no matter where they are located.

We've created complete solutions based on your **needs**, from **rooms of different sizes** to different **collaboration styles**. Our solutions for corporate go much **further** than conferencing and can be deployed in **various situations** and **environments**; from the boardroom to the breakout area or ideation workshops, empowering business leaders and staff to **maximize their potential** and let them be more **successful**.

Gert Van Erum
CEO 13-TECHNOLOGIES

The modern meeting room essentials.

Create an **easy-to-use** and straightforward environment for **traditional, hybrid, or bring your own device** meetings, equipped with the right technology to create **high-quality** and **inclusive experiences**.

Content Sharing

Share **content** from your device via **one-cable** connection or wireless presenting tools. **Brainstorming** with the team? Share **notes** from your whiteboard by simply generating **QR-code**.

Interactive Touchscreen

Grab a pen and start **whiteboarding**, cast your presentation, **browse** the internet, **annotate** over pictures, documents, and much more with only **one** device. Multiple displays can be managed remotely. Learn more on pg. 32.

Conferencing Camera

To ensure that participants **see** and **hear** each other **clearly**, look for cameras with a **wide-angle lens**, **built-in microphone**, and face recognition. Learn more on pg. 24.

Conferencing Software

Hardware should **integrate** with popular meeting room systems; compatible with **Zoom, Microsoft Teams** or similar apps, and support "BYOM" scenario.

Mobile Stand

A **mobile** stand helps you to use your interactive display in the meeting room then **move it** to the project office or boardroom – move it as you wish and need.

Air Quality Monitor

Monitoring your indoor air quality is crucial to prevent the spread of viruses or airborne diseases, but it also effects energy and productivity levels of employees. Learn more on pg. 38.

Improve your meetings with collaboration technology.

Unintuitive technology in a meeting room can be a real workflow killer. Today, meeting rooms should nurture a traditional, hybrid, or BYOM-friendly working environment, allowing teams to work seamlessly no matter their location or technological know-how providing an equal experience for everyone.

Upgrade traditional meetings.

Use your own laptop, tablet, or mobile device and easily screen share, annotate, or whiteboard in one place by leveraging the interactive display already present in the meeting room. Whether it's a scheduled meeting or a spontaneous brainstorm, the technology in the room can enhance collaboration among the team.

Improve hybrid meetings.

We make it easy to host a meeting with colleagues who are in the office or working remotely. Choose your video conferencing software with a professional 4K camera and start presenting. Whether physically present or remote, everyone has the same great experience.

Easily bring your own meetings.

Use your own device to host a meeting and don't lose time downloading software or struggling with software you don't know. We make it easy to host a meeting with your own preferred conferencing software while using the meeting room camera and share your screen on the interactive display.

Traditional meetings.

When someone says meeting room, what comes to mind? Usually a large table, uncomfortable chairs, and a **whiteboard** or **flipchart**. The attendees usually have a **mix** of notepads, laptops, or mobile phones. Once the meeting is over, content is erased from the board or removed from the flipchart and **lost**, unless someone is kind enough to send a **follow-up** email.

With the help of **collaborative** technology such as an **interactive touch display** equipped with an **infinite whiteboard**, **video conferencing**, **annotation**, and integrated productivity apps, you can be sure **everything** is **seen** and everyone is **heard**. With **one** touch the knowledge can be **shared** and stored **instantly** and best of all – **no cables** are required.

Challenges

- ✗ Easy and fast screen sharing
- ✗ Saving and sharing whiteboard/flipchart notes
- ✗ Limited space on the whiteboard or flipchart

Solutions

- 💡 Share your presentation in one click with i3ALLSYNC dongle.
- 💡 Notes can be shared instantly via QR Code, email or stored on the i3TOUCH. Infinite canvas for notes in i3STUDIO software.
- 💡 Infinite canvas for notes in whiteboarding software.

Hybrid meetings.

More than **80%** of companies operate with **mixed present workforce**, some working remote and some from the office. Remote attendees are dialed in on a speaker in the middle of the table, but it's **hard to tell** who is participating or share any presentations with them.

The right meeting room ecosystem is **crucial** in ensuring that **everyone** is **fully represented** and connections feel **natural**. A meeting room ecosystem is **essentially** the technology, including both **hardware** and **software**, that creates **productive** and **engaging hybrid collaboration**. By equipping meeting rooms with the right tools that work together, you can count on an **optimal** collaborative experience.

Challenges

- ✗ Spending too much time starting a meeting with remote attendees.
- ✗ Not everyone seen or heard well.
- ✗ Difficulties working on one document simultaneously and getting the full message across.

Solutions

- 💡 Walk into the meeting room and start your meeting with one touch on i3TOUCH.
- 💡 Wide-angle lens and omnidirectional mic using i3CAMERA so everyone is seen & heard.
- 💡 Meeting notes and presentations are seen and shared instantly, with the ability to work simultaneously, giving an equal experience for all.

i3CAMERA PRO

i3ALLSYNC

Bring your own meeting.

A special breed of hybrid meeting is when you have to **start** it from **your computer**, rather than the devices in the room. With Bring Your Own Meeting (BYOM), we **walk** into a meeting room with a **personal device** to start the meeting. You **lose time setting up** your meeting **logging in** to a certain platform, finding the **right cable**, running **out of battery**...

Using your laptop, an interactive display, and a **one-cable** (USB-C) connection, you can **instantly** and **seamlessly extend** the **capabilities** of your device. Just one cable for **audio, video, power, and touch**. Enjoy having access to **all the tools** connected to the display, such as the webcam or mic for video conferencing, straight from **your laptop**. You can have **up to 6 people** presenting at once, or use **picture-in-picture** mode to multi-task.

Challenges

- ✗ Mess of cables to connect to devices and share content.
- ✗ Mix of technology and devices that aren't compatible.
- ✗ Remote attendees are unengaged and unable to follow along.

Solutions

- 💡 One cable for video, audio, charging, screen sharing and touch on i3TOUCH or i3SIXTY Pro.
- 💡 Technology which is compatible with third-party collaboration tools.
- 💡 Everyone's input can be shared by annotating using i3STUDIO.

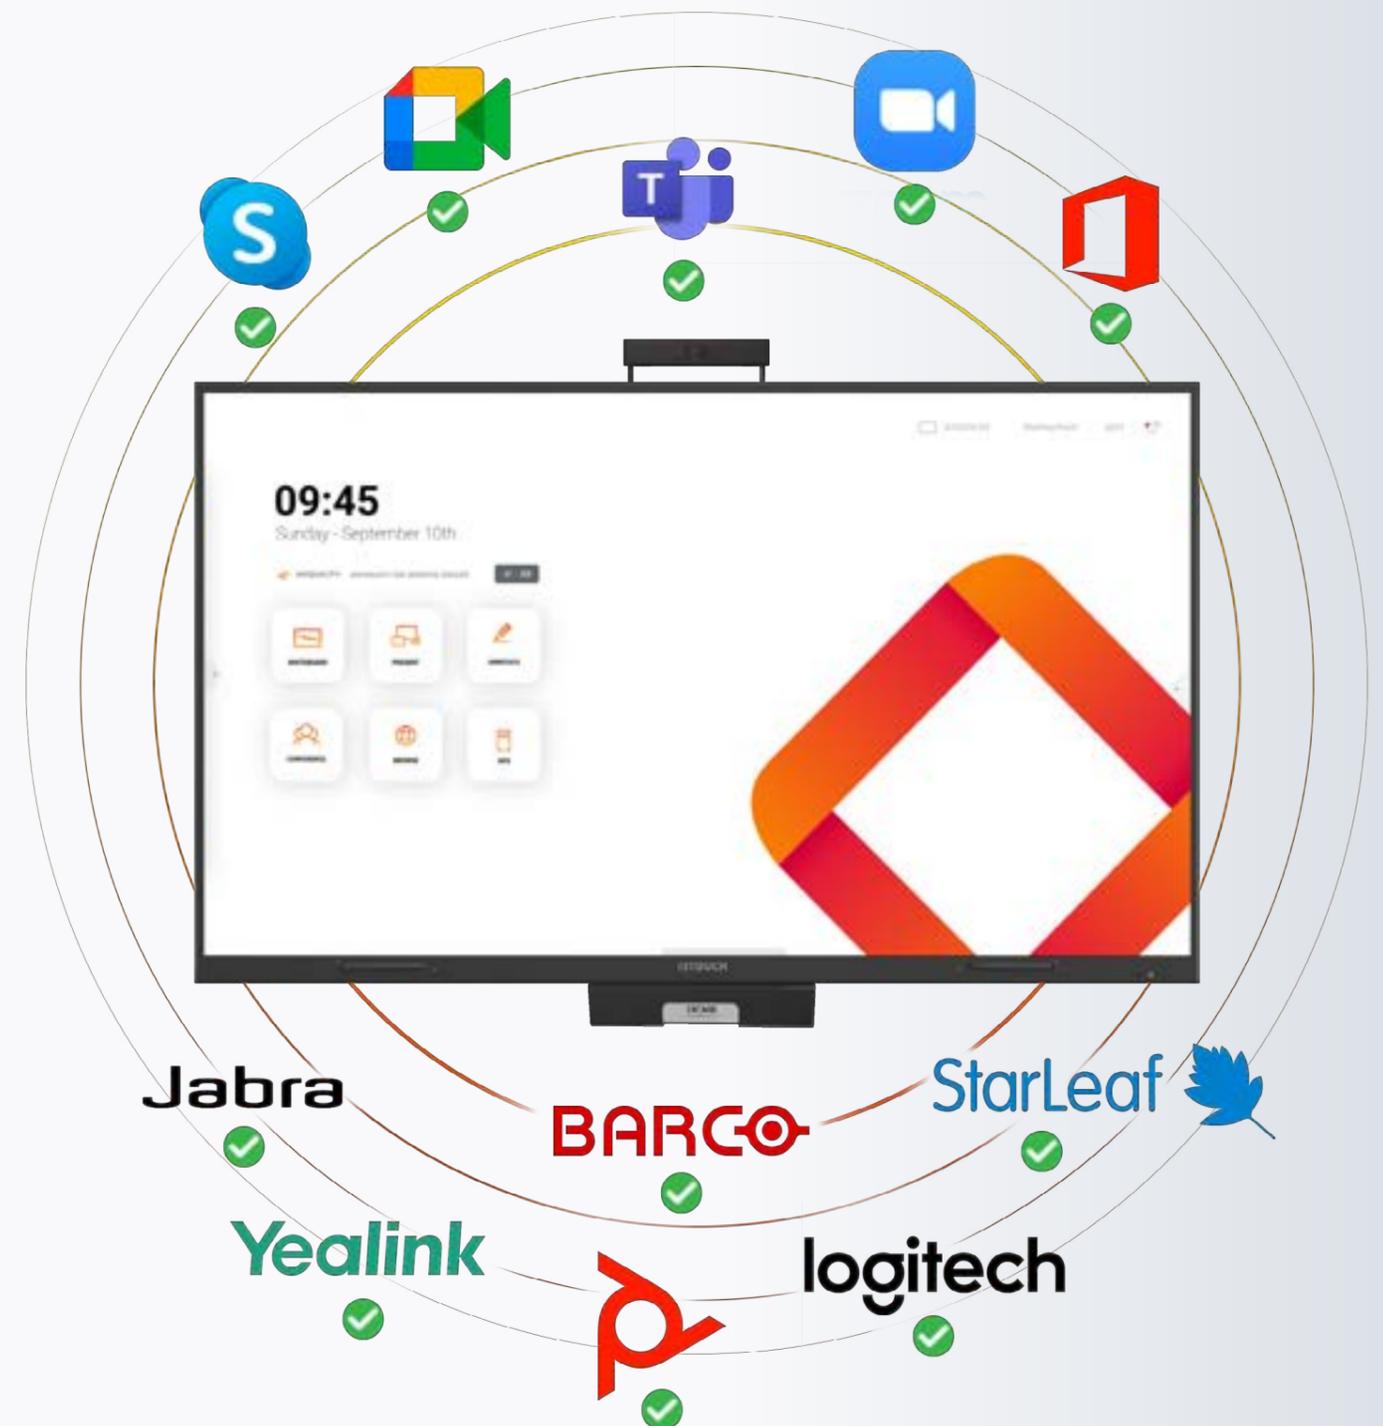

Our suggested solutions

Endless compatibility.

The technology in your meeting room should be **compatible** with the room, the users, and the **existing infrastructure** within your organization. When considering technology for the physical room, the size plays an important role for the size or quantity of **interactive displays**, the video conferencing camera for audio and visual so **everyone** is **seen** and **heard**, as well as **productivity** and monitoring tools like whiteboarding or remote display management.

Creating a user-centric meeting room also takes into account hardware and software that is easy to use and ensures everyone has an equal experience whether they are remote or present in the office. Finally, it's crucial the technology that is implemented is able to work with existing platforms that your organization might already use such as **Zoom (Rooms)**, **Microsoft Teams (Rooms)**, **Google Meet**, **Cisco WebEx**, etc.

OUR MEETING ROOM Digital Ecosystem

No office or meeting room is the same, which is why our solutions allow you to create **your own custom solution** covering all of your needs. With the i3TOUCH at the center of the ecosystem, you can integrate our collaboration tools in ways which are **unique**, **efficient** and **effective** for your meeting environments.

CASE STUDY:

Champion Level Collaboration.

The Belgian Hockey Federation (KBHB), has invested in a new headquarters, The Center of Excellence, which is a state-of-the-art facility. It is comprised of all features and amenities that will support the KBHB on their way to success and assure the Belgian national teams, both women and men, can continue to play a prominent role in the international hockey scene.

i3-Technologies' interactive displays were installed in the Center of Excellence, which allow the teams to distribute game tactics and strategies, take notes, video conference and present using the i3TOUCH interactive flat panels. With the i3TOUCH, the KBHB meetings can be more purposeful and interactive. This will also help the Federation to save 80% of travel costs between branches.

Moreover, the national team's players and technical staff can analyze every detail with participants in other locations of the Federation. The Hockey League also makes use of the indoor air quality sensor, i3CAIR, to keep the team safe and avoid the spread of airborne viruses in their headquarters.

Customer: Hockey League Belgium

Challenge: Tactics, content sharing, remote collaboration, conferencing

Solution: i3TOUCH EX, i3CAIR, i3ALLSYNC

Equip yourself to win.

i3-Technologies' interactive displays were installed in the Center of Excellence, which allow the teams to distribute game tactics and strategies, take notes, video conference and present using the i3TOUCH interactive flat panels.

With the i3TOUCH, the KBHB meetings can be more purposeful and interactive.

This will also help the Federation to save 80% of travel costs between branches.

Watch the full story!

The team can be in their huddle room in the Center of Excellence and have a video conferencing call with the specialists in Australia. They can call and at that same time when trying to explain something, they can put up the footage, they can draw on it, and they can share it.
